Let Visitors Save Your Web Pages to PDF

Pdfcrowd offers a very simple and straightforward way to save your web pages to PDF. Just paste the following code verbatim into your HTML. It creates a link that converts the containing page to PDF.

```
<a href="//pdfcrowd.com/url_to_pdf/">Save to PDF</a>
```

Options

You can customize the PDFs using these parameters:

Parameter	Description
width	Page width.
height	Page height. Use -1 for a single page PDF.
hmargin	Horizontal page margins.
vmargin	Vertical page margins.
footer_text	Footer text. The following variables are expanded: <ul style="list-style-type: none">%u - Source URL.%p - The current page number.%n - Total number of pages.
use_print_media	Use the print CSS media type if available.
pdf_name	The file name of the created PDF. If not specified then the name is auto-generated.

Page dimensions and margins can be specified in inches (in), millimeters (mm), centimeters (cm), or points (pt). If no units are specified, points are assumed. Examples: 210mm, 8.5in

Usage Examples

- A4 page
 - //pdfcrowd.com/url_to_pdf/?width=210mm&height=297mm
- Letter page
 - //pdfcrowd.com/url_to_pdf/?width=8.5in&height=11in
- Single-page PDF
 - //pdfcrowd.com/url_to_pdf/?height=-1
- Add the current page number to the page footer
 - //pdfcrowd.com/url_to_pdf/?footer_text=page%20%p
- Use the print version of the page
 - //pdfcrowd.com/url_to_pdf/?use_print_media=1

Here is a [demo link](#).

How It Works

- The Save to PDF Link service picks up the URL of the web page from the [HTTP referrer](#).
- The web page must be accessible on the public Internet.
- Only the current web page can be converted, it is not possible to specify a different URL to convert.

Domain License

The Save to PDF Link service is free, you don't need a Pdfcrowd account to use it. However, for commercial web sites, you might consider purchasing a [Domain License](#) for your domain which removes the Pdfcrowd branding from PDF.
